

## COMMUNICATING NEWS YOU NEED TO KNOW NOW...

*AceCare is our way of reaching out to you with the latest news as it relates to our industry in these uncertain times.*

*We will use this forum to tell you about products, features, and news from us, and our suppliers as it pertains to our industry during the outbreak.*

## SANITIZING - HOW TO DO IT BETTER

Many of you who have been practicing safe hygiene have probably noticed that your hands are becoming dried and cracked. If you're like me, you're wondering **what can I do to combat the dryness**. So I set out to do some research into what strategy I could use to ensure that I am effective at cleaning my hands of contaminants while protecting them from dermatitis. Here's what I found out...

We know that "typical" hand sanitizers contain alcohol (60-70%). Daily, over time, repeated use may lead to dermatitis. In one study, the prevalence of contact dermatitis related to hand hygiene (with alcohol) ranged from 25 to 55 percent.

Hypochlorous (HOCL) **used in place of hand sanitizer with no irritating side effects in over 20 countries\***. Moreover, the punch HOCL delivers to pathogens is **more powerful than the one delivered by alcohol**. Hypochlorous is 100 percent safe for humans, chemical free, non-toxic and all-natural. At 6.3-6.5 pH it helps promote healing without causing damage to human cells.

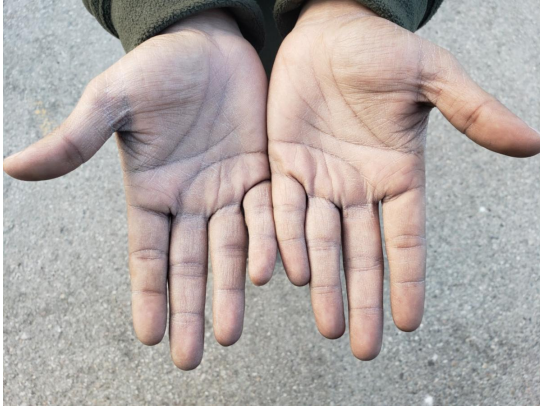

\* HOCL is approved for hand sanitizing in over 20 countries

**In conclusion, switching your alcohol based sanitizer for Ultra-Lyte will serve to both effectively sanitize and reduce the harmful effects that cause dermatitis.**

**ULTRA-LYTE** (Hyphochlorous acid)

***Dilute Ultra-Lyte ULD500 by 1/2 with water for hand sanitizer***

- More effective than alcohol at sanitizing hands
- 100% safe, chemical free, non-toxic & all natural

- 6.3-6.5 pH promotes heading without causing damage to human cells.

## Non Medical Masks in the Warehouse

Non medical grade masks can be worn in a factory /warehouse environment to avoid droplets from your nose and mouth, contaminating the air/surfaces around you and also to prevent you from touching your mouth and nose with your hands. The specifications of filtration and liquid permeability are much higher for Medical grade masks.
