

Established in 1983, AceTronic is a recognized specialist and partner within the plastics molding industry. This includes providing parts, components and systems used to manufacture everything from; molded auto components (eg. fuel tanks) to vinyl window casings for construction, through to food packaging and shampoo bottles. AceTronic is well equipped to serve the various plastic molding processes including injection, extrusion, thermoforming and blow molding.

AceTronic is an OEM of custom cables and equipment that are utilized within the injection molding space. Our cable and harness capabilities have expanded beyond the plastic molding market to include; robotics, communications and more.

AceTronic enjoys exclusive Canadian Distribution alliances with 8 key U.S. plastics industry suppliers and manufacturers including; Progressive Components, Slide, and SmartFlow.

AceTronic is known for its superior customer service, in-house technical knowledge, and wide product base. Its products include temperature control systems, mold components, custom mold power and thermocouple cables, voltage controllers, as well products used to clean, rust-proof, lubricate and purge equipment. Services include; instrument calibration for both temperature and pressure, electronic and instrument repair and maintenance.
