

COMMUNICATING NEWS YOU NEED TO KNOW NOW...

AceCare is our way of reaching out to you with the latest news as it relates to our industry in these uncertain times.

We will use this forum to tell you about products, features, and news from us, and our suppliers as it pertains to our industry during the outbreak.

The Affects of Disinfecting on your Health

New research suggests that deploying all those extra work and household disinfectants might be triggering asthma flare-ups.

Researchers conducted an online survey of 795 adults with asthma between May and September 2020. It found a large increase in respondents who said they used household disinfectants five or more times a week: 138% for disinfectant wipes, 121% for disinfectant sprays, 155% for bleach and water solution, and 89% for other cleaning liquids.

Disinfectants often contribute to poor indoor air quality and may

contain chemicals that cause cancer, reproductive disorders, respiratory ailments (including occupational asthma), eye and skin irritation, central nervous system impairment, and other human health effects.

Switch to Ultra-Lyte and Breathe Free

Ultra-Lyte® disinfectant is nontoxic to humans and animals.

There are no known health risks associated with its use. Ultra-Lyte is biodegradable and **does not harm the environment.** After use, Ultra-Lyte turns into very weak brine. It does not introduce chemical or soap residue into the ecosystem.
