## Is your mold alignment off?

**Do you typically rely on routine calibration to ensure your system is in alignment?** Alignment and condition monitoring instruments require proper maintenance, care and calibration at specific intervals to achieve the highest possible measurement, reliability, and accuracy. **[Mold Calibrations require routine down-time and additional costs which year over year result in hours and money lost.](#)**

**Make sure your mold is always in alignment -- [without ever needing calibration again!](#)**

## **With Gefran Tie Bar Technology - Your Mold Alignment is Always on Point**

The Gefran System troubleshoots the mold alignment and determines where and when it is off alignment. No more outsourcing for calibration is required.
